Term 1 Checklist: All Topics

Topic	Learning Outcomes	RAG Yourself	
		1	2
Y6 Induction	Link the brightness of a lamp or the volume of a buzzer with the number and voltage of cells used in the circuit		
	Show how circuit components work, including the brightness of bulbs, the loudness of buzzers and the on/off position of switches		
	Use symbols when representing a simple circuit in a diagram e.g. bulbs and switches		
	Recognise that living things have changed over time and that fossils provide information about living things		
	Recognise that living things produce offspring of the same kind, but normally offspring vary and are not identical to their parents		
	Identify how animals and plants are adapted to suit their environment		
	Explain that unsupported objects fall towards the Earth because of the force of gravity		
	Identify the effects of air resistance, water resistance and friction		
	Describe the changes as humans develop to old age		
	Identify the main parts of the human circulatory system, and describe the functions of the heart, blood vessels and blood		
	Recognise the impact of diet, exercise, drugs and lifestyle on the way their bodies function		
	Describe the ways in which nutrients and water are transported within animals, including humans		
	Recognise that light appears to travel in straight lines		
	Explain that we see things because light travels from light sources to our eyes or from light sources to objects and then to our eyes		
	Use the idea that light travels in straight lines to explain why shadows have the same shape as the objects that cast them		
	Describe the differences in the life cycles of a mammal, an amphibian, an insect and a bird		
	Describe how plants reproduce		
	Describe how animals reproduce		
	Describe how living things are classified into groups according to common characteristics		
Cells	Draw a labelled diagram of an animal cell including: membrane, nucleus and cytoplasm		
	Compare plant and animal cells using a diagram		
	Describe the role cell organelles e.g. membrane, nucleus, cytoplasm, mitochondria		
	Label a diagram to show the parts of a microscope		
	Define specialised cell		
	Identify specialised cells of plants and animals from a diagram		
	Explain how the adaptations of specialised cells are linked to their function		
	Order the levels of organisation in organisms		
	Describe how cells make tissues and tissues make organs		
	State the function and location of key human organs		
	Give three reasons why cell division takes place		
	Sequence the stages of cell division		
	Explain why heart rate must increase during intense exercise		
Energy	Name the different forms of energy store e.g. kinetic, thermal		
	Describe the difference between energy stores and transfers		
	State the four ways energy can be transferred		

	Draw energy transfer diagrams for a candle, a catapult and a TV		
	Identify useful and wasted energy in an energy transfer		
	Calculate the percentage efficiency of an energy transfer		
	Describe the difference in terms of energy transfer of an efficient device and a less efficient device		
	State the meaning of "non-renewable"		
	State the tree types of fossil fuel and describe their uses		
	Explain how fossil fuels are used to generate electricity in a power station		
	Define what a renewable energy resource is		
	State examples of renewable energy resources e.g. solar, wind		
	Explain how solar, wind and tidal resources work in terms of energy transfer		
	Compare the advantages/disadvantages of renewables and fossil fuels
