Term 1: Human Body Checklist

Topic	Learning Outcomes	RAG Yourself	
		1	2
Human Body	Draw labelled diagrams of plant and animal cells		
	Explain the importance of mitochondria in releasing energy		
	Define diffusion and give examples of diffusion in the human body		
	Describe how to calculate rate of diffusion in cm/s		
	State the 3 main nutrients and describe their uses in the body		
	Explain how temperature and concentration changes affect rate of diffusion		
	Explain why starch is an important storage molecule		
	Describe how to perform an iodine test for starch and interpret the results		
	Describe how to perform a Benedict's test for sugar and interpret the results		
	Name the major digestive organs and describe their functions		
	Describe the order food travels through the digestive system		
	Describe where chemical and mechanical digestion take place
