Term 3 Checklist

Topic	Learning Outcomes	RAG Yourself	
		1	2
Cells	Draw a labelled diagram of an animal cell including: membrane, nucleus and cytoplasm		
	Compare plant and animal cells using a diagram		
	Describe the role cell organelles e.g. membrane, nucleus, cytoplasm, mitochondria		
	Define specialised cell		
	Identify specialised cells of plants and animals from a diagram		
	Explain how the adaptations of specialised cells are linked to their function		
	Order the levels of organisation in organisms		
	Describe how cells make tissues and tissues make organs		
	Give three reasons why cell division takes place		
	Sequence the stages of cell division		
	Compare animal and bacterial cells		
	Explain why toothpaste contains anti-bacterial chemicals		
	Define communicable disease		
	State the types of organisms which cause disease		
	Describe the importance of cellular respiration		
	Give the word equation for aerobic respiration		
	Explain why some specialised cells have more mitochondria than others		
	Describe the effects of exercise on heart and breathing rate		
	Explain why heart rate must increase during intense exercise		
Chemicals	Describe what an element is in terms of types of atoms		
	Describe how a molecule is formed from atoms		
	Compare chemical compounds to mixtures		
	Explain why chemical compounds are hard to separate		
	Draw particle diagrams of the three states of matter: solids, liquids and gases		
	State the physical properties of the three states of matter		
	Compare the kinetic energy of particles in different states of matter		
	Explain why solids and liquids cannot be compressed easily, but gases can		
	Identify the four main changes of state		
	Describe what happens to the particles in a substance during a change of state		
	List a range of common household acids and bases		
	Describe how litmus paper can be used to test acids and bases		
	Describe how universal indicator can be used to test acids and bases		
	Match colours to numbers on the pH scale		
	Compare how useful different pH indicators are		
	Describe what a neutralisation reaction is		
	Give the chemical equation for a neutralisation reaction		
Forces and Motion	Describe the difference between contact and non contact forces		
	State a range of contact and non-contact forces		

	State which variable goes on each axis		
	Draw force arrows on objects that are at rest or moving		
	Calculate the resultant force of an object when two forces are acting on it		
	Explain why an object will start to accelerate using the idea of forces		
	Explain why an object will travel at a steady speed using the idea of forces		
	State the units of mass and weight		
	Explain why your weight changes on different planets but your mass does not		
	"Calculate your mass or weight. Try this one: Earth's gravity is 9.8N/kg, Mr Wormstone has a mass of 78kg. What is his weight?"		
	State the forces that occur when a boat moves through water and floats on water
