Term 6 Checklist: Electricity

Topic	Learning Outcomes	RAG	
		1	2
Electricity	Describe how charged particles interact		
	Describe what causes static electricity		
	State which particle moves in an electrical current		
	Compare electrical conductors and insulators		
	Use a simple model to describe the difference between current and potential difference (voltage)		
	State the units of current and potential difference		
	Explain why current is the same at all points in a circuit		
	Explain why some materials conduct electricity		
	Describe the difference between a series and parallel circuit (Set 1)		
	Calculate the current in a series and parallel circuit (Set 1)		
	State how to measure current and potential difference		
	Draw complete circuit diagrams using a rule, pencil and straight lines		
	Draw a range of common circuit symbols e.g. wire, voltmeter, bulb		
	Describe the difference between AC and DC and give an example of the use of each		
	Calculate the cost to run an electrical appliance		
	Discuss how to reduce electricity costs in the home		
	State what happens when two magnets are brought close together		
	Draw a magnetic field pattern around a bar magnet		
	State the difference between a permanent magnet and an electromagnet		
	Describe the uses of electromagnets		
	Describe how to make an electromagnet stronger (use the 3cs)		
	Describe how an electric motor works		
	Evaluate the impact of electric and petrol cars on the environment		
	Describe the steps involved in how a power station works		
	Compare how a coal fired power station and wind turbine work		
	State the energy transfers carried out by solar panels		
	Give advantages and disadvantages of the use of renewable energy resources e.g. solar panels and wind turbines		
	Convert between millimetres, centimetres and metres
