Term 6 – Year 7 Key Points Checklist

Topic	Learning Outcomes	RAG	
		1	2
Y7 Key Points	Draw a labelled diagram of an animal cell including: membrane, nucleus and cytoplasm		
	Describe the role cell organelles e.g. membrane, nucleus, cytoplasm, mitochondria		
	Compare plant and animal cells using a diagram		
	Define communicable disease		
	State the types of organisms which cause disease		
	Suggest ways we can prevent the spread of communicable diseases		
	Give the word equation for aerobic respiration		
	Explain why heart rate must increase during intense exercise		
	Name the different forms of energy store e.g. kinetic, thermal		
	Draw energy transfer diagrams for a candle, a catapult and a TV		
	Identify useful and wasted energy in an energy transfer		
	Explain how fossil fuels are used to generate electricity in a power station		
	Compare the advantages/disadvantages of renewables and fossil fuels		
	Describe how carbon dioxide causes a greenhouse effect		
	State the approximate percentage of each gas in our atmosphere		
	Describe two processes that have caused the atmosphere to change over time		
	Describe what an element is in terms of types of atoms		
	Explain why chemical compounds are hard to separate		
	State the physical properties of the three states of matter		
	Describe how litmus paper can be used to test acids and bases		
	Describe how universal indicator can be used to test acids and bases		
	Compare how useful different pH indicators are		
	Explain why filtration could not be used to separate a mixture of salt and water		
	Describe how distillation can be used to separate a mixture of liquids		
	Describe the difference between contact and non contact forces		
	Draw force arrows on objects that are at rest or moving		
	Calculate the resultant force of an object when two forces are acting on it		
	Explain why your weight changes on different planets but your mass does not		
	Explain why friction occurs between two surfaces		
	State the equation that links speed, distance and time.		
	Calculate speed, distance or time using the equation s = d/t. Try this one: A car travels 90m in 45s. What is its speed?		
	Explain how pressure is caused inside a can of coke in terms of particles		
	Identify producers, consumers and decomposers in a feeding relationship		

	State the resources that animals and plants compete for		
	Describe the role of pollen and how plants reproduce		
	Give the word equation for photosynthesis		
	Explain how plants are adapted for photosynthesis		
	Describe the roles of different plant structures e.g. leaves, roots, stems, flowers		
	State the general features of the five major vertebrate groups		
	Describe what it means for an animal to be adapted to its environment		
	Describe how acid rain is formed from burning fossil fuels		
	Describe how charged particles interact		
	Compare electrical conductors and insulators		
	State the units of current and potential difference		
	Explain why current is the same at all points in a circuit		
	Draw complete circuit diagrams using a rule, pencil and straight lines		
	Draw a range of common circuit symbols e.g. wire, voltmeter, bulb		
	State what happens when two magnets are brought close together		
	Draw a magnetic field pattern around a bar magnet		
	Describe how to make an electromagnet stronger (use the 3cs)		
	Compare how a coal fired power station and wind turbine work
